

# ARKIANE - ECLYPSA

## Eclipsya Technical characteristics

**Output :** 12 KW/H  
**Heating volume :** 230 m<sup>3</sup>  
**Weight :** 140 kg  
**Materials :** Steel - stainless steel  
**Finishing :** High temperature paint anthracite color  
**Glass :** 4 mm thick ceramic glass (750°)  
**Logs length :** 50 cm  
**Ash tray :** yes  
**Options :** - nomade kit, - supplementary flue connecting piece

When night falls in the desert nomadic tribes start setting up their tents, for one night at one place. Later, they will come together around a camp fire sharing a convivial meal and daily stories ...

The Arkiane designers have indeed been inspired by the nomadic life when creating Eclipsya. An innovative technical concept enables to remove the fireplace from one place to another in order to illuminate and to heat different rooms : the living room on cold winter evenings, the sleeping room on rainy April days, the terrace during long summer nights.

### Design

The Arkiane designers created a classical and ethetical shape without any visible flue pipe, covering the smokes' evacuation underneath the floor. The result : Eclipsya looks like a fire circle in your room.

### Heat efficiency

Thanks to the secondary air inlet and the post combustion system ECLYSPYA reach a heat efficiency of 78% an output of 12kW.

### The nomadic principle

You could easily move éclipsya from one place to another with its special support on four wheels.

This way, you will enjoy your fireplace all around the year.

In addition to that, you could turn éclipsya into the direction you want (360° rotation).
